Notes

Vapor intrusion monitoring -- vapors in the vadose spill from the 2015 release, some vapor monitoring

Insurance company denies payment for vapor monitoring, recommended installation of vapor pin for sub slab sampling -- no communication about previous recommendation until now

Have an indoor air issue -- will they meet with consultant and insurance company to discuss sub slab sampling????

Amenable to the sub slab sampling -- may get some resistance about putting holes through good slab

Communication breakdown took place -- get all parties together for conference call -- Tribe cannot find communication recommending use of vapor pin

Indoor vapor sampling last resort as per OUST 2015 Vapor Intrusion Guidance -- near slab sampling then sub slab sampling

Preferential pathways for conduits, near slab sampling was hot

Corrective action paid to meet 40 CFR 280 -- Chub did not see follow up on vapor pin

Indoor sampling cost \$600
